3PL Business (Domestic)

For logistics operation at any stage of customers’ supply chain and its peripheral operations, we provide a comprehensive outsourcing service and excellent IT/technological capabilities to support it to improve service quality and logistics efficiency. As a leading 3PL company, we provide the best logistics solution by drawing on our abundant experience and consulting capabilities and comprehensive infrastructure, as well as always lead the industry evolution by continuing to work with customers and partners to promote collaborative innovation through installation of the next-generation logistics technology using the latest technology.

Positioning of the HTS Group in the Market

As a market leader in the ever-expanding domestic 3PL market, the HTS Group comprehensively undertakes logistics operations of customers in a wide range of sectors and industries (see chart on the right). We are a pioneer of 3PL and have been providing service since the 1980s. We support supply chains in Japan with our proposal capabilities backed by abundant experience and management capabilities offered by professionals with deep customer knowledge.

Major Services
- Procurement logistics: We provide a comprehensive service from picking up purchased products to acceptance inspection, storage, and supply. Our high-value-added services include VMI*, assembly/painting of parts, and delivering to production lines. Production logistics: We undertake various logistics operations in the manufacturing process including management, packaging, and shipping of materials and products. Our packaging professionals provide optimal packaging solutions according to product features and logistics conditions. Distribution logistics: We provide comprehensive support from the supply chain design stage, including a review of site allocation and inventory level. We support customers to expand orders received and sales through high-quality and highly efficient logistics design and operation making full use of the latest technology.

Solutions: We provide a number of high-value-added solutions such as services integrating logistics and ICT* skills for ICT equipment and collaborative logistics services for hazardous/chemical products.

* VMI: Vendor Management Inventory
** ICT: Skills for customers' engineers who configure and perform operation check of ICT equipment

Examples of LOGISTEED2024 Priority Measures

With an aim to expand business domains with new added value (accelerate LOGISTEED2) as set forth in priority measures in the Mid-term Management Plan, we are working to further increase business value by expanding domains.

We will provide VAS by focusing on an enhancement of value creation in the boundary domain between manufacturing and logistics using experience and expertise in factory logistics gained through many years of our services for manufacturing customers including the Hitachi Group and transport equipment manufacturers.

Development/Introduce a Unique Truck Loading Dock Booking Management System

We set forth “Evolve Smart Logistics” and “Solidify ESG management base” as priority measures in the Mid-term Management Plan and are working on initiatives to enhance creation of economic and social values through our businesses. For example, we endeavored the “White Logistics” movement and are working on the development and introduction of an original truck loading dock booking management system linked to Warehouse Management System (WMS), etc. Booking and allocating loading dock for truck loading at our logistics center can reduce waiting time and traffic congestion and also improve drivers’ working conditions and truck usage efficiency and reduce CO₂ emissions.

The feature of the system we are developing and introducing is that, in addition to having general functions, it is also capable of linking data with existing WMS and vehicle assignment systems, enabling more efficient operation as well as practical and detailed visualization/analysis by integrating information on cargoes, work, vehicles, and loading dock availability that are usually managed separately.

We have already completed the development/ introduction and verification for a model site and plan to complete the introduction to major sites of domestic group companies by FY2023 to prepare for so-called the “2024 problem”

Message from the officer in charge

We will further enhance DL, LT, and Gamba Power, the strengths of our 3PL business, to increase our business value. While we aim to deliver greater economic value to customers by using digital technology to visualize and solve supply chain issues and offering VAS through physical measures, we will also further evolve Smart Logistis to enhance creation of economic and social values through our business, including addressing the “2024 problem” and contributing to a decarbonized society.
