With an aim to become the most preferred global supply chain solutions provider, the LOGISTEED Group promotes the Mid-term Management Plan “LOGISTEED2024” which started in FY2022 and strives to achieve sustainable growth by solving issues and creating values through various “collaborative innovation.”

**LOGISTEED2024**
- Solidify business and develop global business
- Becoming a global supply chain strategic partner with DX, LT, and “Gemba” Power
- “ST Logistics Technology”

**LOGISTEED2030**
- Realizing our Future Vision by way of solid partnership
- Collaborative innovation with partners to enhance capability
  1. High value-added solutions to optimize the entire SCM
  2. Improve customer convenience and efficiency through DX
  3. Enhance overseas value chain with a consistent approach
  4. Engage actively in projects to make advance investment
  5. Promote strategic M&As
  6. Solidify position as a platform provider

**Mid-term Management Plan – LOGISTEED 2024 –**

**Priority Measures**
1. Reinforce and expand overseas business
2. Expand business domains with new added value
3. Evolve Smart Logistics
4. Solidify ESG management base

**Corporate Vision**
- The LOGISTEED Group delivers high-quality services that will help make the world a better place for people and nature for generations to come.

**Corporate Philosophy**

**Environmental Recognition and Direction**
Recognizing declining birthrate, aging population and labor shortages in Japan, unstable global situation, and supply chain vulnerability risk as changes in the external environment, we defined the direction to take as follows.

**Investment Plan**

The Group aims to create economic value as well as social and environmental values by making business investments mainly to expand sites and strategic investments to realize its medium-to-long term vision using mainly operating cash flows and cash and cash equivalents.

**Priority Measures**

**Invest in growth opportunities**

- Reinforce and expand overseas business
- M&As, capital policy, etc.
- Expand business domains
- Evolve Smart Logistics
- Solidify ESG management base

**Value Creation Achievements**

**Foundation Supporting Value Creation**
Mid-term Management Plan –LOGISTEED2024–

Priority Measures 1. Reinforce and Expand Overseas Business

Overview of Priority Measures
- Execute M&As in all areas:
  - North America (transport), Europe (3PL and freight forwarding), India (transport)
- Expand investments and businesses in priority areas:
  - India, Thailand, Indonesia, and Malaysia (auto parts, groceries, daily commodities, etc.) and China (automation, labor saving, etc.) ➔ PS4

Progress of Priority Measures
- Expand business in growing areas and markets through M&As
  - The Group is expanding its pharmaceutical business in order to contribute to the healthcare domain which is becoming increasingly important due to the advancement of an aging society and the spread of infectious diseases. In FY2022, we made Cyber Freight International Holding B.V., a freight forwarding company in the Netherlands having strength in the healthcare domain, our subsidiary*1 and acquired CEIV Pharma*2 certification at Kansai International Airport and Hong Kong International Airport following the acquisition at Narita Airport in 2021 as part of our efforts toward building a high-quality supply chain for temperature-controlled transportation of pharmaceutical products.

In addition, in response to growing demand for e-commerce, we acquired the reverse logistics services for apparel e-commerce in Europe from Viikova Partners s.r.o. in FY2022.*3 We plan to further develop high value-added services that combine this business with 3PL and freight forwarding.*3

*2 CEIV Pharma (The Center of Excellence for Independent Validators in Pharmaceutical Logistics): A uniform international standard of a quality certification for air transport of pharmaceutical products developed by the International Air Transport Association, which encompases Good Distribution Practice (GDP) logistics standard to ensure the quality of pharmaceutical products throughout the supply chain requirements which differ depending on countries and regions.

Services provided by Cyber Freight International Holding B.V.

- Storage area by temperature zone (15 to 25°C, 2 to 8°C)
- Freezers (-20°C)
- Pharmaceutical exhibition (customs inspection)
- Reverse logistics services for apparel e-commerce

In addition, in response to growing demand for e-commerce, we acquired the reverse logistics services for apparel e-commerce in Europe from Viikova Partners s.r.o. in FY2022.*3 We plan to further develop high value-added services that combine this business with 3PL and freight forwarding.*3

*3 EVA s.r.o. is a group company, acquired the reverse logistics services for e-commerce operators from Viikova Partners s.r.o., a logistics company in Czech Republic. Please refer to the press release for details. https://www.logisteed.com/en/news/pdf/20220527.html

- Expand investments and businesses toward the realization of decarbonized society

We are also actively promoting initiatives to realize a decarbonized society through transportation with low environmental load, including further expanding the network of intermodal transportation (multimodal transportation), which is a strength of Mars Logistics Group Inc., our group company in Turkey, and additionally enhanced shared milkrun services provided by a U.S. company J.P. Holding Company Inc. in North America.

Due to contributions from the above initiatives, global logistics revenues in FY2022 were 375.9 billion yen, up 20% year-on-year, and adjusted operating income was 21.1 billion yen, up 55% year-on-year, and the ratios of global logistics revenues and adjusted operating income to total revenues were 46%, respectively. To achieve the FY2030 target to increase the overseas ratio to 50%, we will work to further strengthen and expand our overseas business by making aggressive investment in priority areas, especially to meet growing demand for cold chains.

Revenues and adjusted operating income (% of total revenue)

| Global logistics revenues and adjusted operating income to total revenues were 46%, respectively. To achieve the FY2030 target to increase the overseas ratio to 50%, we will work to further strengthen and expand our overseas business by making aggressive investment in priority areas, especially to meet growing demand for cold chains.

Priority Measures 2. Expand Business Domains with New Added Value

Overview of Priority Measures
- Solve supply chain issues, propose visualization and optimization through DX
- Expand new services in boundary domain between manufacturing and logistics, commerce VAS

Progress of Priority Measures
As the modern supply chains are becoming more complicated and sophisticated, we are working together with our customers to increase their business values as a strategic supply chain partner through the visualization and total optimization by DX.

- Enhance SCDCOS functions

Our supply chain optimization service, SCDCOS* offers services that go beyond the logistics domain to support customers to design and upgrade entire supply chains and to sophisticate visualization and analysis of CO2 emissions, etc.

* Please refer to this page for more information on SCDCOS services https://www.logisteed.com/en/news/pdf/2022092902en.pdf

We are expanding SCDCOS functions on a continuing basis to contribute to further refinement and overall optimization of customers’ supply chains and the enhancement of environmental value such as decarbonization. In FY2022, we newly released SCUN* that is used by customers to improve their operational efficiency. With regard to the supply chain CO2 visualization and analysis services, the scope of the service was expanded to include all of Scope 1, 2 and 3* as a result of the collaborative innovation with Hitachi, Ltd. This allows us to monitor daily CO2 emissions from customers’ entire supply chains and to contribute to the development of the decarbonization strategy, including a medium-to-long-term roadmap to reduce CO2 emissions using simulations.

*1 Scope 1: Direct emissions of greenhouse gases caused by the business itself
*2 Scope 2: Indirect emissions from the use of electricity, heat, and steam supplied by other companies
*3 Scope 3: Emissions from other companies related to the activities of the business operator

- Expand VAS

We aim to grow together with our customers by understanding social changes and the needs of the times and providing high value-added services that address social issues and meet customer needs. These services include support for compliance with GDP requirements for pharmaceutical products as well as efforts toward the realization of a decarbonized and recycling-oriented society, through Recovice, SSCV, and SCDCOS, etc.

For customers of our service
- Process delivery
- Goods destruction
- Fixtures restoration
- Recycling and reuse

For cosmetics manufacturing
- Regulatory labeling
- Assorted goods
- Label printing and management
- Other service

For automobile parts manufacturers
- Returnable container cleaning
- Specialty store retailer of private label apparel and others
Mid-term Management Plan —LOGISTEED2024—

Priority Measures 3. Evolve Smart Logistics

Overview of Priority Measures
- Achieve automation and labor-saving through linkage of systems and machines, improve working environment through DX
- Enhance and expand functions of three-temperature zone warehouses, hazardous substances warehouses, etc.
- Enhance the transport business and address the 2024 issue as well as decarbonization through SSCV

Progress of Priority Measures
- Enhance warehouse business (Automation, labor-saving, and DX)
  The Group is focusing on improving working environment through automation, labor-saving, and DX in order to maintain and expand stable business operations even under the environment where the working-age population is declining. We are continuously introducing and expanding automated facilities in our logistics centers, and in June/August 2022, the Automated Robotic Sorting system (ARS) introduced in East Japan II Medical DC received the Excellence Award at “the 28th Japan MH Grand Prize” and the Semi Grand Prize at “Logistics Award 2022.” As part of the DX solutions we provide, we are enhancing functions of RCS, an integrated control system developed by us for smart devices, automated facilities, and digital devices used to improve and visualize productivity. In addition to our in-house initiatives to promote automation and labor-saving, in cooperation with government agencies, we are also promoting standardization initiatives and other measures to establish the environment to facilitate the introduction of automated facilities.

- Enhance transport business (Address the 2024 issue and decarbonization)
  In the transport business, we are accelerating both physical and digital initiatives to improve transport efficiency, appropriately cope with the 2024 issue, and further reduce CO₂ emissions. The physical initiatives aim to increase large capacity and short-haul truck transport using double-trailer trucks, swap body**, and relay transport, as well as expand initiatives to consolidate vehicle assignment through shared terminals and virtualized operations. We also promote introduction and active use of modal shift and electric vehicles.
  In one of the digital initiatives, we developed and introduced an ultrafast vehicle assignment simulation using quantum computers, which enables quick calculation of the optimal vehicle allocation and delivery route taking into account special factors such as cargo size, weight, arrival time, and vehicle size restrictions, which were difficult with conventional computers.
  Furthermore, as an initiative that combines physical and digital solutions, one of our group companies, VANTEC EUROPE LIMITED (UK) is promoting the Vehicle Connected Automated Logistics (V-CAL)** project for automated electric vehicles which utilize 5G-based remote monitoring, with the aim of realizing a decarbonized society and safe driving through automated driving.

* Cyber Physical System

Priority Measures 4. Solidify ESG Management Base

Overview of Priority Measures
- Implement disaster prevention measures and risk management
- Implement sophisticated and consecutive safety and quality control activities
- Accelerate decarbonization activities
- Continue and expand VC activities
- Strengthen human resources for DX, LT, and global development

Progress of Priority Measures
- Implement sophisticated and consecutive safety and quality control activities
  The Group has long been actively promoting initiatives to improve safety, quality, and productivity, and as an advanced case, we are building a “visualization system” to centrally control the operational status of logistics sites. In FY2022, we introduced a video management system (VMS) (**P76)** with advanced functions to three model business sites in Japan and built a visualization environment enabling remote monitoring of unsafe behaviors and dangerous events. We also established the Centralized Safety and Quality Control Center at the head office, which can centrally control status of all sites installing the system. Going forward, we will promote automatic detection of unsafe behaviors and dangerous events from images using AI recognition and centralized control of detected events on a portal system, as well as build visualization environment in many more logistics sites.

- Develop and strengthen DX, LT, and global human resources
  The Group develops and implements human resource strategies linked to our management and business strategies to become a leading global 3PL company.

  In terms of human resource and skill development, we are focusing on the development of human resources with skills required for 3PL site operation, DX, LT, and global business. Our efforts to that end include promoting the visualization of human resources and skills by building a “HR visualization platform” shared by domestic and overseas group companies to accumulate and centrally manage human resource data, and providing training programs appropriate for individual skills and issues by enhancing group training, on-demand inhouse training, and external training courses, etc.

  In FY2022, as part of the initiatives to develop human resources with DX skills, we provided education for logistics data scientists to 26 volunteers, held collaborative innovation training for a total of 87 young sales and technical staff of Hitachi, Ltd., LOGISTEED, Ltd., and LOGISTEED Solutions, Ltd., introduced MicroMasters program in Supply Chain Management at Massachusetts Institute of Technology (MIT) in the U.S. on a trial basis, sent our employee to Master of Applied Science in Supply Chain Management program at MIT and so on.

  As these efforts and application of SCODS and SSCV as well as their expansion through external sales were evaluated, the Company was selected as one of the Digital Transformation Stocks 2022 (DX Stocks 2022)** by Ministry of Economy, Trade and Industry of Japan in collaboration with Tokyo Stock Exchange and Information-technology Promotion Agency, Japan.

  * A program which selects companies for each industry that have established internal systems to promote DX businesses to increased economic results and are engaged in efforts to avoid incidents of digital failure. A total of 70 companies were selected.

- Accelerate decarbonization activities
  The Group has set the medium-to-long-term environmental targets of reducing CO₂ emissions by 50% in FY2030 compared to FY2013 and launched a decarbonization project to promote energy saving, energy creation, electrification, and procurement of renewable energy, etc. As measures to achieve our FY2024 target (96 thousand tons of CO₂) are being implemented according to the plan, we were able to reduce CO₂ emissions by 7 thousand tons of CO₂ year-on-year in FY2022 as a result of initiatives including modal shift, installation of solar panels, and introduction of electric vehicles and renewable energy. We achieved a 19.4% reduction compared to FY2013, and will steadily work to achieve a 50% reduction in FY2030 ➔ P66
