## LOGISTEED Receives Special Award at the 24<sup>th</sup> Logistics Environment Awards

LOGISTEED, Ltd. (LD) received a special award at the 24<sup>th</sup> Logistics Environment Awards sponsored by the Japan Association for Logistics and Transport. This award was given to EcoLogiPortal (CO<sub>2</sub> emissions visualization service in the transportation domain of supply chain) which LD and our Group company, LOGISTEED Solutions, Ltd., jointly developed.

### [Summary of the initiative]

So far, it is required a lot of workload time to collect and aggregate data from various system, such as shipping details or operation information which are necessary for calculating CO<sub>2</sub> emissions. EcoLogiPortal enables to collect necessary data and calculate CO<sub>2</sub> by linking the system to LOGISTEED's IT infrastructure. Those data make it possible to visualize CO<sub>2</sub> emissions at various granularities, such as by region, shipping mode, and product category.

With these data, we obtain a broad view of CO<sub>2</sub> emissions in the customers' transportation domain, and we propose the consideration and implementation of specific actions to reduce CO<sub>2</sub> emissions.

System Overview of the EcoLogiPortal

Under the corporate philosophy “to deliver high-quality services that will help make the world a better place for people and nature for generations to come,” the Hitachi Transport System Group strives to achieve sustainable growth by solving issues and creating “values” through various “collaborative innovation.”
