

Introduced Our Activity Plan for Reusing EV Batteries **~Toward Establishing a Circular Resource System~**

LOGISTEED Ltd. is pleased to announce that it introduced its activity report at the network conference of the Green EV Battery Network Fukuoka (GBNet Fukuoka), held in Fukuoka City, Japan.

GBNet Fukuoka is a Public-Private Partnership Organization established to develop the “Fukuoka Model,” a circular resource system designed to economically and environmentally optimize the collection, reuse, recycling, and remanufacturing of used EV batteries, which are expected to increase rapidly in the coming years. Since joining in November 2024, LOGISTEED has actively contributed to addressing social challenges through one of its material issues: “Contribute to recycling-oriented society.”

At the open-style network conference, participating members shared updates on past initiatives and outlined activity plans for the current fiscal year. LOGISTEED presented its demonstration project under the theme “Battery Information Integration and Logistics Optimization,” focusing on the management of individual battery data within the second-life battery supply chain and the development of a circular logistics scheme across the Kyushu region. Through these efforts, LOGISTEED aims to validate the effectiveness of the “Fukuoka Model” and actively promote its expansion nationwide.

Under the corporate philosophy, "to deliver high-quality services that will help make the world a better place for people and nature for generations to come," the LOGISTEED Group strives to achieve sustainable growth by solving issues and creating values through various collaborative innovations.
