

## LOGISTEED Solutions, Ltd. Launches New Service "Drive Vital" to Enhance Driving Safety Through Fatigue-Based Alerts

LOGISTEED, Ltd. is pleased to announce that one of our group companies, LOGISTEED Solutions, Ltd., has launched a new service called "Drive Vital"<sup>\*1</sup>, which manages drivers' health using a band-type device<sup>\*2</sup> and alerts them based on their fatigue levels.

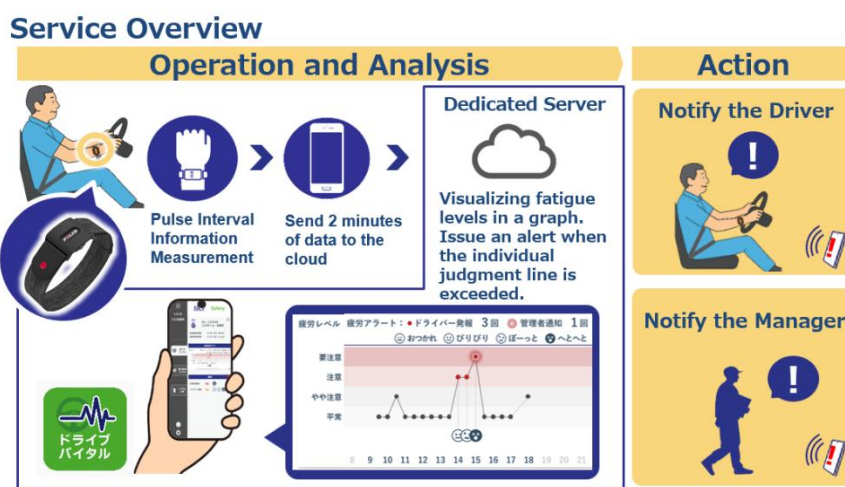

This service is derived and separated from certain functions of our group's safe operation management solution, "SSCV<sup>®</sup>-Safety," which we develop and provide. It analyzes the autonomic nervous system using the pulse interval information measured by the designated band-type device, allowing real-time visualization of the driver's fatigue level while driving. The fatigue level is evaluated in five stages, and when it exceeds the individual risk assessment line for accidents, an audio alert is issued to both the driver and the manager from a smartphone with the dedicated app<sup>\*3</sup> downloaded.

By utilizing devices capable of high-precision measurement and scientific evidence, the system monitors changes in drivers' physical conditions to reduce operational errors and near-miss incidents, while also helping to prevent inattentive driving that could lead to serious accidents.

\*1 "Drive Vital" is currently under trademark application.

\*2 The device designated by LOGISTEED Solutions, Ltd. (Polar Verity Sense).

\*3 After subscribing to the service, users can download the dedicated app from the Google Play Store and start using it. The app is also available via the URL below.
