

“SSCV® Automated Roll Call” Certified as an Automated Roll Call System for Pre- and Post-Operation Checks – Enhancing Operational Efficiency and Helping Prevent Accidents –

LOGISTEED, Ltd. announces that it has implemented the “SSCV Automated Roll Call” function in its safety operation management solution, SSCV-Safety, and that the system has been certified by Japan’s Ministry of Land, Infrastructure, Transport and Tourism (MLIT) as an automated roll call system for both pre- and post-operation checks.

1. About Roll Call

Roll Call is a critical operation mandated by law for all motor truck transportation business operators to ensure the safety of drivers and vehicles, and in principle is required to be conducted face to face.

Automated roll call, by contrast, is a roll call method conducted by drivers without the presence of an operation manager, using devices or systems certified by MLIT, based on roll call schedules prepared in advance by an operation manager.

2. About SSCV Automated Roll Call

This service provides core functions of SSCV-Safety tailored for automated roll call operations, and goes beyond the simple digitization of roll call procedures by delivering a high-quality roll call environment that helps prevent accidents through features such as “comprehensive health condition assessment” and “near-miss forecasting” based on accurate vital data.

In addition, the service can be flexibly adapted to various operational styles and site environments, supporting not only automated roll calls conducted outside company premises, but also IT-based roll calls and remote roll calls. Through these capabilities, the service contributes to both greater efficiency in operation management and enhanced safety.

LOGISTEED’s “SSCV Automated Roll Call” has received certification from MLIT as both an automated pre-operation roll call device and an automated post-operation roll call device.

Under the slogan "Safety for all transport," SSCV-Safety uses the power of technology, and prevents the occurrence of accidents and provides services that bring safety to transport sites. We aim for zero accident society and continue to strive to improve our services.

END
