

**LOGISTEED Receives the Best Logistics Improvement Award**  
**~ 98% Reduction in Near-Miss Incidents Through Driver Health and Operations Visibility ~**

LOGISTEED, Ltd. is pleased to announce that it has received the highest honor, the Best Logistics Improvement Award, in the Logistics Management Division at the All Japan Logistics Improvement Case Study Conference 2025, organized by the Japan Institute of Logistics Systems and the Japan Logistics Qualification Society.

This annual competition aims to strengthen operational capabilities in logistics by sharing outstanding improvement cases, providing insights and know-how for solving issues, and facilitating information exchange among practitioners. Held on May 13 and 14, this year’s event featured 42 excellent case presentations across two divisions: Logistics Operations and Logistics Management. LOGISTEED, Ltd. presented its initiative titled “SSCV@-Safety” in the Logistics Management division, which was highly evaluated by the executive committee as the most outstanding improvement case, leading to this award.

Presenting at the conference

At the award ceremony

In recent years, LOGISTEED’s safety initiatives through “SSCV-Safety” have been recognized across various sectors. In November 2024, we received the Gold Prize at the “Safety Driving Award 2024,” and in December of the same year, it was honored with the Minister of Land, Infrastructure, Transport and Tourism Award at the “FY2024 Transport Safety Management Excellent Business Operator Awards.” This marks the third time the company has received a top-level award.

**Presentation Details**

<b>Title</b>	Visualizing Drivers’ Health and Operations with IoT × AI Technology to Reduce Near-Miss Incidents
<b>Overview</b>	In the transportation industry, accidents caused by drivers’ physical and mental health conditions are on the rise. LOGISTEED, Ltd. experienced multiple rear-end collisions in 2015, prompting the development of the “SSCV-Safety” safe operation management solution through industry-government-academia collaboration. This solution enables real-time monitoring of drivers’ health, fatigue, and risky driving behaviors. After implementing SSCV-Safety across the LOGISTEED Group, near-miss incidents that could lead to serious accidents were reduced by 98%.
